

Net Health Wound Care can help you incorporate telehealth into your workflow.

The Net Health Wound Care Patient Portal provides a secure line of communication between you and your patients.

- Conduct virtual visits and follow-up conversations
- Receive images and documents from your patient
- Provide patients with on-demand access to their health information

Net Health Wound Care's Videoconferencing for Telehealth* allows you to initiate and launch a video chat with your patient directly from the Wound Care application.

- Interact with your patients in real-time over a HIPAA-compliant video connection
- Provide access to care for patients with travel limitations

** The Patient Portal is included with your Wound Care license. However, videoconferencing is available for a fee.*

Not sure where to start?

We've developed a 360 Professional Services Telehealth offering to help guide you in preparing your clinic to administer remote care for your patients. To learn more, contact us at WoundCare@nethealth.com or 800.411.6281.
