Your Manual for Navigating COVID-19

For clinicians who manage employee health for hospitals and other healthcare settings, life has been overwhelming over the past year, and that's putting it mildly. Managers have to track both exposures and vaccinations, not just for COVID-19, but also the flu. They're responsible for reporting health and medical data, along with regulatory compliance and business insights.

To further complicate the job, many are still using paper records, and then inputting information later. Occupational health managers deal with all these same headaches, and they do it for multiple clients! Imagine if we could streamline the process, eliminate paper with all the potential for error it carries, and seamlessly link to electronic health records, all with one software solution.

Net Health® Employee Health for Hospitals and Occupational Medicine offers total compliance tracking and employee wellness oversight in one specialized and paperless documentation solution.

Perform exposure tracking efficiently with confidence

Track multiple exposure incidents, which are not uncommon in healthcare settings.

Track employee symptoms by automating proactive follow-up contact.

Monitor employee requirements such as testing and quarantining.

Record and track responses to COVID-19 screening questions.

Record and report on location of exposure for employees.

Track vaccinations on the go with Mobile Immunization Tracking on a tablet or laptop

Choose convenience with patient data loaded from Net Health Employee Health and immunization data sent back. Print or email confirmations to patients.

Tackle compliance with electronically recorded patient consent forms. Immunization data and VIS is pulled directly from CDC.

Sharpen accuracy by scanning patient badges to quickly identify employees. Increase speed of data entry with pre-populated fields for large groups.

Visualize business data at a glance with Net Health Business Insights

View high-level aggregated data quickly and easily to drive actionable decisions.

Filter results in seconds without having to run and compile multiple reports.

Reallocate time spent running reports and spend more of it with patients.

Visualize data in four key areas: Injuries and illnesses, Compliance, Productivity, and Cost.

This year, resolve to spend less time on cumbersome paperwork, endlessly uploading data, and spend more time with patients, tracking immunizations and exposures. **Net Health® Employee Health for Hospitals and Occupational Medicine are software solutions that integrate with EHRs and streamline processes for multiple exposure tracking, immunization tracking, and key performance indicators.**

The busy pace of employee health at today's healthcare and medical facilities necessitates an efficient, organized approach that eliminates opportunities for human error. The Coronavirus vaccines are here, and the end of the pandemic is in sight. Now is the time to double down on efficiency, and Net Health has the tools.
